# Read this first

This handbook was produced for practical application of the SHARP EL-9900 Graphing Calculator. This calculator includes a highly convenient programming function, which enables automatic processing of both simple and complex calculations any number of times.

## 1. Entering and Editing a Programme (Advanced keyboard mode only):

Programmes can be entered and edited either by pressing the calculator keys or by downloading from a PC. To download programmes from a PC, you will need the CE-LK2 PC link software (sold separately).

In this handbook, we use the symbol “\*” to represent multiplication, and the symbol “/” to represent division. Please follow this convention when entering and editing programmes via the PC-Link software. When entering programmes directly through the EL-9900’s keypad, meanwhile, please use the  $\square$  and  $\square$  keys.

### A. Using calculator keys

- Creating a new programme:

1. Press  $\square$  to display the programme menu.
2. Press  $\square$   $\square$  to select the new programme menu. (See right)
3. Enter the programme title, then press  $\square$ .
4. Enter the programme.
5. Press  $\square$   $\square$  to finish programming.

- Editing a programme:

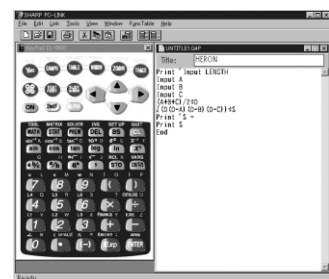

1. Press  $\square$  to display the programme menu.
2. Press  $\square$  and choose the number of the programme you wish to edit. (See right)
3. Press  $\square$   $\square$  to finish editing.

### B. Downloading from PC

- Creating a new programme:

1. Using the CE-LK2, select **New** from the **File** menu.
2. Enter a programme name in **Title**.
3. Enter a programme. (For details on entering a programme, refer to the operation manual.) (See right)

- Programmes can also be downloaded from Sharp’s website at

<http://sharp-world.com/products/calculator/education/program/index.html> instead of creating a new programme.

- Sending programmes from a PC:
  1. Using the CE-LK2, select the **Communication Port** from the **Link** menu and click on the port to be used.
  2. Turn off the EL-9900 and connect it to the PC.
  3. Turn on the EL-9900
  4. Select **Send...** from the **Link** menu of the CE-LK2 (See right)
  5. Specify the kind of drive, folder, and file, then select the file to be sent from the file list, and click on the **Select** button.
  6. Click on the **OK** button.

*Note :* For further details refer to the manual.

## 2. Executing a programme:

1. Press **PRGM** to display the execute menu.
2. Press **A** **ENTER** and choose the number of the programme you wish to execute. (See right)
3. Follow the instructions.

## 3. Deleting a programme:

- Press **2nd F** **OPTION** **C** and then choose **5** to select the programme to be deleted.

*Note:* Do not try to erase a programme by resetting all memories to the initial condition as programme data to be stored will also be deleted. Also, it is advised to use the CE-LK2 PC link software to back up any programmes not to be erased.

## 4. Using the keys:

- Press **2nd F** to use secondary functions (in yellow).  
 To select " $X^{-1}$ ": **2nd F** **X<sup>2</sup>** → Displayed as follows: **2nd F** **X<sup>-1</sup>**

- Press **ALPHA** to use the alphabet keys (in violet).  
 To select F: **ALPHA** **X<sup>2</sup>** → Displayed as follows: **ALPHA** **F**

- Press **2nd F** **A-LOCK** to continue input of violet letters.  
 To input ABC: **ALPHA** **A** **ALPHA** **B** **ALPHA** **C** OR **2nd F** **A-LOCK** **A** **B** **C**  
 (To return to the normal function, press **ALPHA** again.)

---

## 5. Troubleshooting:

Following is a list of error codes and error messages.

When errors occur, refer to pages 233 and 234 of the manual.

Error code	Error message	Error content
01	Syntax	Syntax error found in equation/programme.
02	Calculate	Calculation-related error found (division by 0, calculation beyond range, etc.).
03	Nesting	Cannot nest more than 14 numerical values, or 32 functions during execution.
04	Invalid	Matrix definition error or entering an invalid value.
05	Dimension	Matrix dimension, or STAT list dimension, inconsistent.
07	Invalid DIM	Size of list/matrix exceeds calculation range.
08	Argument	Inconsistency found in argument of the structured function.
09	Data Type	Invalid data type used in calculation.
10	No Sign Change	Financial calculation error found.
11	No define	Undefined list/matrix used in calculation.
12	Domain	Argument definition outside of domain.
13	Increment	Increment error found.
16	Irr Calc	More than two inflection points for Irr calculation.
17	Stat Med	Med-Med law (statistic) error found.
20	No Argument	Argument missing.
21	Not pair ∫ dx	∫ and dx are not used in a pair.
22	Not pair [ ]	Brackets are not used in a pair.
23	Not pair ( )	Parentheses are not used in a pair.
24	Not pair { }	Braces are not used in a pair.
25	Line over	Line is over the capacity.
26	Not delete	Unable to delete a selected item.
27	Buffer over	Input/equation exceeds buffer capability.
30	Edit type	Invalid editor type found.*
31	Continue =	" = " exists in equation that has been recalled (RCL).
32	No data	Data does not exist.
33	Graph Type	Graph type setting incorrect.
34	Too many var.	Too many variables assigned in the SOLVER.
35	No variable	No variable specified in the SOLVER.
36	No solution	No solution found.
37	No title	No title entered.
38	Too many obj	More than 30 objects selected.

Error code	Error message	Error content
40	Lbl duplicate	Labels with identical name found in programme.
41	Lbl undefined	Goto/Gosub encountered with no defined label.
42	Lbl over	More than 50 labels found in programme.
43	Gosub stack	Nesting of more than 10 subroutines found.
44	Line too long	Line contains more than 160 characters.
45	Can't return	Return used without jumping from subroutine.
46	Storage full	Cannot create more than 99 files.
47	Coord type	Invalid coordinate system for command.
48	Without For	For is missing corresponding to the Next command.
49	Without WEnd	WEnd is missing corresponding to the While command.
50	Without While	While is missing corresponding to the WEnd command.
51	Without Then	Then is missing corresponding to the If command.
52	Without EndIf	EndIf is missing corresponding to the If command.
53	Without If	If is missing corresponding to the EndIf command.
70	I/O device	Communication error found among devices.
71	Wrong Mode	Wrong communication mode set.
90	Memory over	Memory is full; cannot store data as requested.
99	System error	System error found; user memory space is insecure.
	Low battery	Operation interrupted due to low battery power.
	BREAK!!	Operation break specified.

\* The following operations may cause Editor type error. Correct the Editor type to continue.

- Recall the SOLVER equations (EQTN) or Graph data (G\_DATA) stored in a different EDITOR mode than currently in use.
- Receive the Graph equation (Y1 and others) entered in a different EDITOR mode than currently in use.

# Heron's Formula

Use Heron's formula to find the area of a triangle when the sides (A,B,C) of the triangle are known.

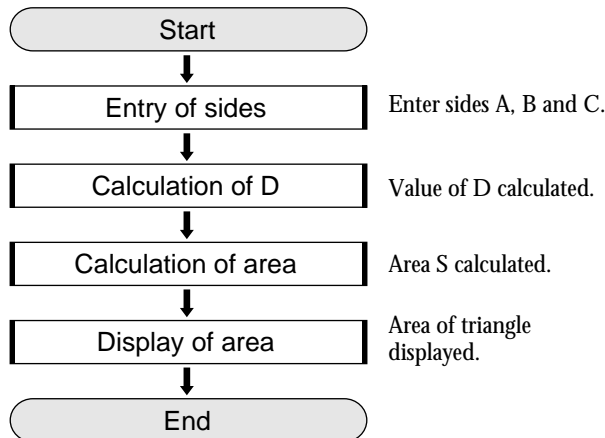

## Calculation

$$S = \sqrt{D (D - A) (D - B) (D - C)}$$

$$D = \frac{(A + B + C)}{2}$$

### FLOWCHART

### PROGRAMME LIST (REAL MODE)

Title : HERON

Print "Input LENGTH  
 Input A  
 Input B  
 Input C  
 $(A+B+C)/2 \Rightarrow D$   
 $\sqrt{(D (D-A) (D-B) (D-C))} \Rightarrow S$   
 Print "S =  
 Print S  
 End

### PARAMETERS

Name of parameter	Content	Name of parameter	Content
A	value of side A	D	value of D
B	value of side B	S	area
C	value of side C		

### Exercise

Find the area of a triangle when sides A, B and C are 20, 35 and 40cm respectively.

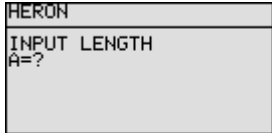

#### Step

#### Key Operation

#### Display

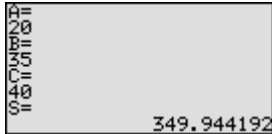

- Specify the programme mode.  
 Select the title HERON.

PRGM A

- Enter the values A, B and C.

2 0 ENTER 3 5 ENTER 4 0 ENTER

(Display of area)

- The area is approximately 350cm<sup>2</sup>.

# Calculating Tension

Use the law of sines to find the tension when a pole of weight  $W$  is suspended with two strings, and the strings are balanced with the angles from the vertical line  $A$  and  $B$ .

## Calculation

$$\frac{T}{\sin B} = \frac{S}{\sin A} = \frac{W}{\sin (A+B)}$$

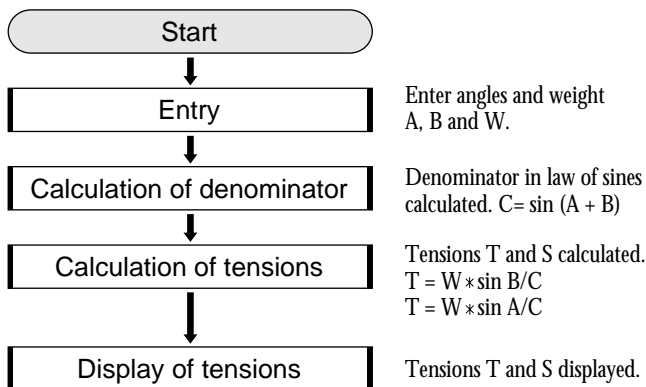

$$\therefore T = W \frac{\sin B}{\sin (A+B)}$$

$$\therefore S = W \frac{\sin A}{\sin (A+B)}$$

$T, S$  : tension     $W$  : weight  
 $A, B$  : angles (6 sexagesimal numbers)

## FLOWCHART

<b>4</b> Tension T is 21.840kg and S is 23.795kg.		

# Involute (Inverse Involute)

Use the involute function for calculating gears etc. to find the angle of obliquity from the initial value and involute value.

Conversely, calculate the involute value from the angle of obliquity.

## Calculation

Involute function :  $\text{inv } \theta = \tan \theta - \theta[\text{rad}]$

Use Newton's method to find the inverse involute:

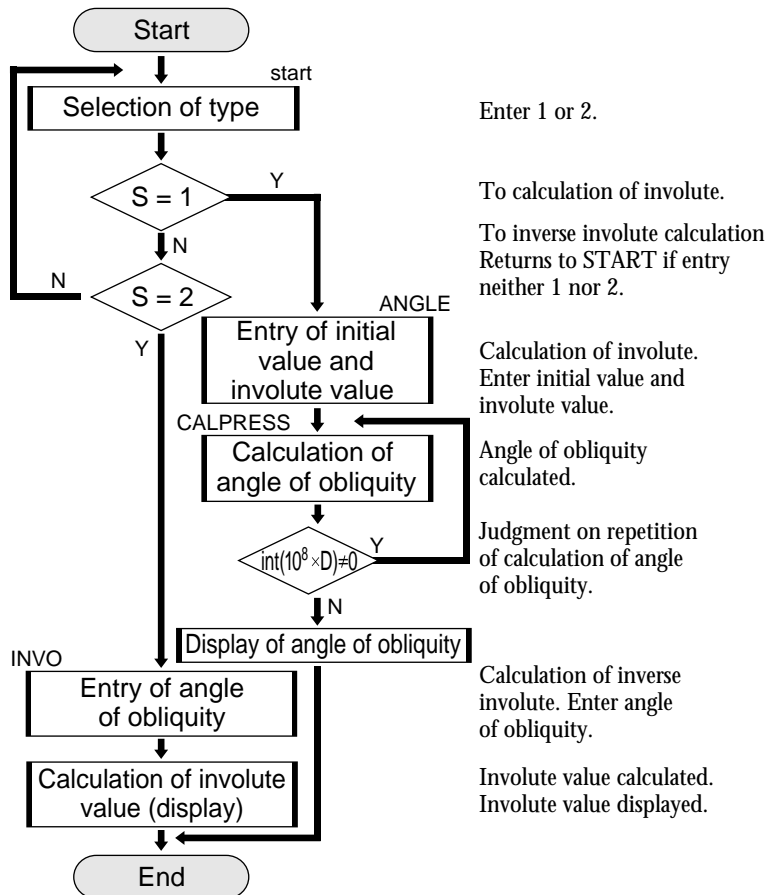

$$\theta_{i+1} = \theta_i - \frac{f'(\theta)}{f(\theta)} = \theta_i - \frac{\tan \theta_i - \theta_i - a}{\tan^2 \theta_i}$$

$$f(\theta) = a - \text{inv } \theta$$

SP : involute curve  
S : involute starting point  
 $\theta$  : angle of obliquity of point P

## FLOWCHART

# Calculating Simple Harmonic Oscillation

Enter period, amplitude and time to calculate displacement at specified time, acceleration, angular velocity, and velocity. Also, display the changes during the entered time period on a graph.

## Calculation

angular velocity :  $\omega = \frac{2\pi}{T}$

displacement :  $x = A \times \sin(\omega t)$

acceleration :  $a = -\omega^2 \times x$

velocity :  $v = A \times \omega \times \cos(\omega t)$

A : amplitude

t : time [sec]

T : period [sec]

$\omega$  : angular velocity [rad/sec]

# Electric Power Consumed on an AC Circuit

Enter the voltage effective value, frequency and resistance value to find the power value of the circuit with resistance R. Draw a graph of the changes in power over a period of time.

## Calculation

P : power consumption I : effective value of current

V : effective value of voltage

$$I_0 = N \cdot \sin \omega \cdot t \quad V_0 = M \cdot \sin \omega \cdot t \quad P_0 = I_0 \cdot V_0$$

$P_0$  : change in amount of power with time

$I_0$  : change in amount of current with time

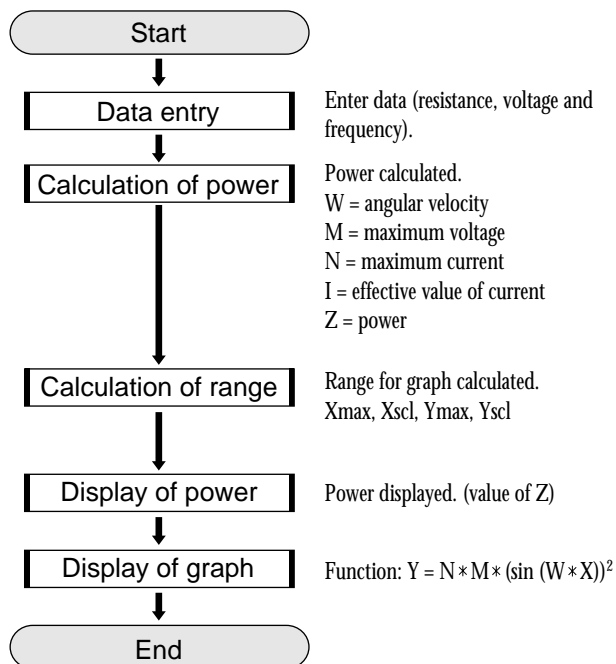

$V_0$  : change in amount of voltage with time

N: maximum value of current M: maximum value of voltage

$\omega$ : angular velocity ( $2\pi S$ ) t : time S : frequency

# Angle of Vector

Use the matrix operation feature to find the angle  $\theta$  which forms the standard vector and vector. The angle can be calculated at one time against the multiple vectors.

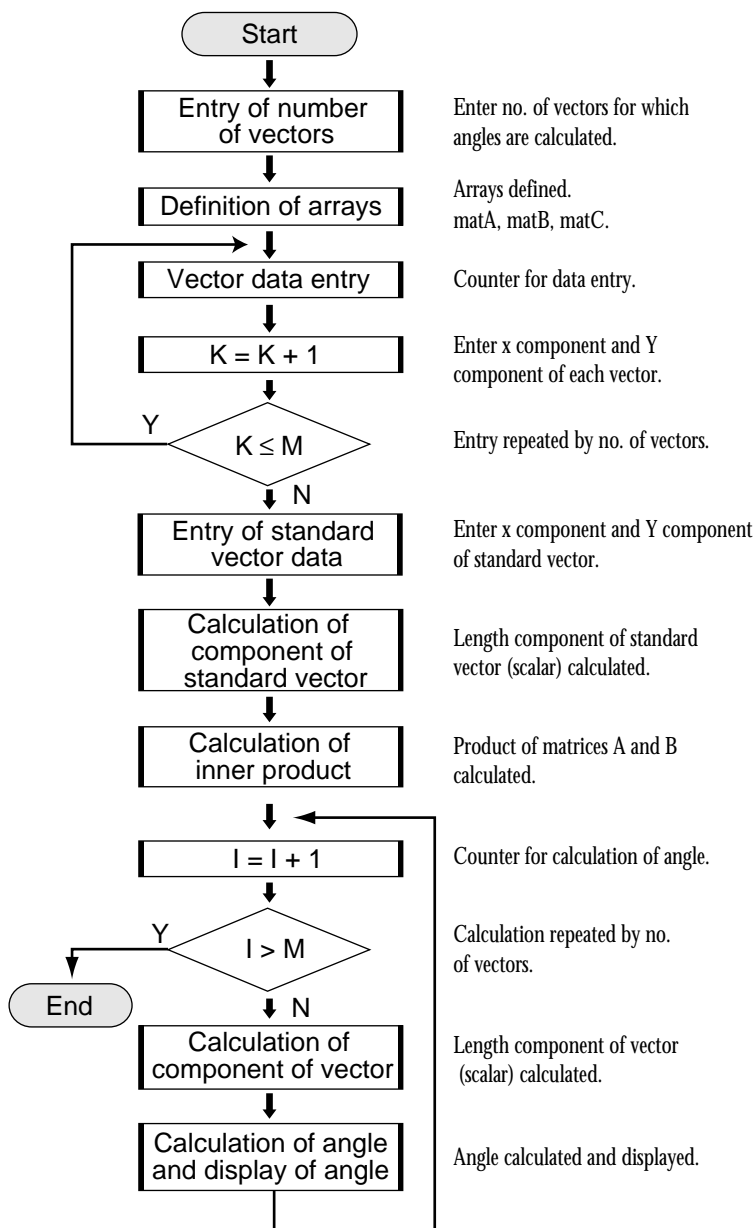

## Calculation

Calculating vector inner product  $\vec{a} \cdot \vec{b} = |\vec{a}| |\vec{b}| \cos \theta$

Use the above expression to derive the following expression

$$\theta = \cos^{-1} \frac{\vec{a} \cdot \vec{b}}{|\vec{a}| |\vec{b}|}$$

# Linear Transformation

Use the matrix to find four types of the linear transformation of x-axis symmetric transformation, y-axis symmetric transformation, similar transformation and revolution around the origin.

## Calculation

1. Symmetric transformation to x-axis (Case 1)

$$\begin{pmatrix} X' \\ Y' \end{pmatrix} = \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix}$$

2. Symmetric transformation to y-axis (Case 2)

$$\begin{pmatrix} X' \\ Y' \end{pmatrix} = \begin{pmatrix} -1 & 0 \\ 0 & 1 \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix}$$

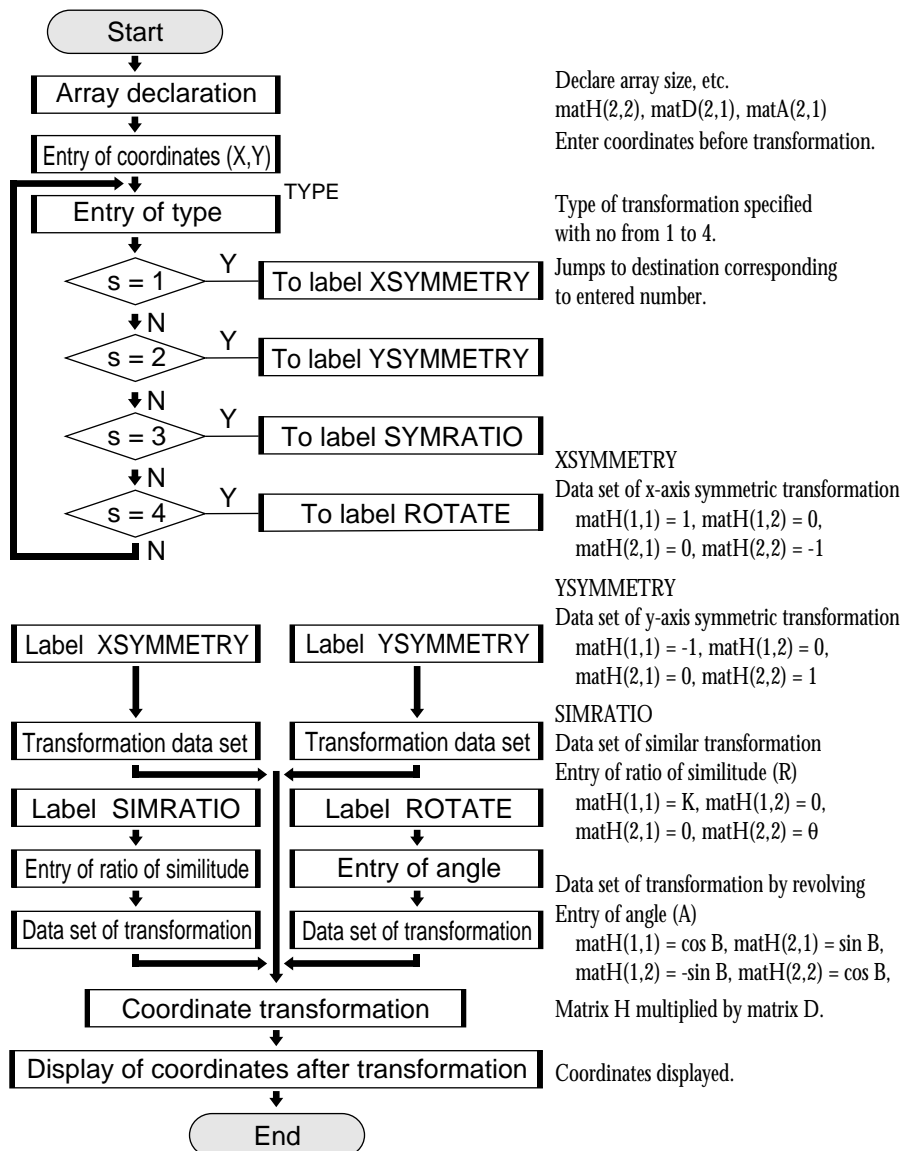

3. Similar transformation with ratio of similitude K around origin (Case 3)

$$\begin{pmatrix} X' \\ Y' \end{pmatrix} = \begin{pmatrix} K & 0 \\ 0 & K \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix}$$

4. Transformation revolving around only angle B at the origin (Case 4)

$$\begin{pmatrix} X' \\ Y' \end{pmatrix} = \begin{pmatrix} \cos B & -\sin B \\ \sin B & \cos B \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix}$$

# Moving Average

Plot a moving average graph which helps to understand how the results change over a specified period. The progress of sales and amounts of consumption and production can also be seen.

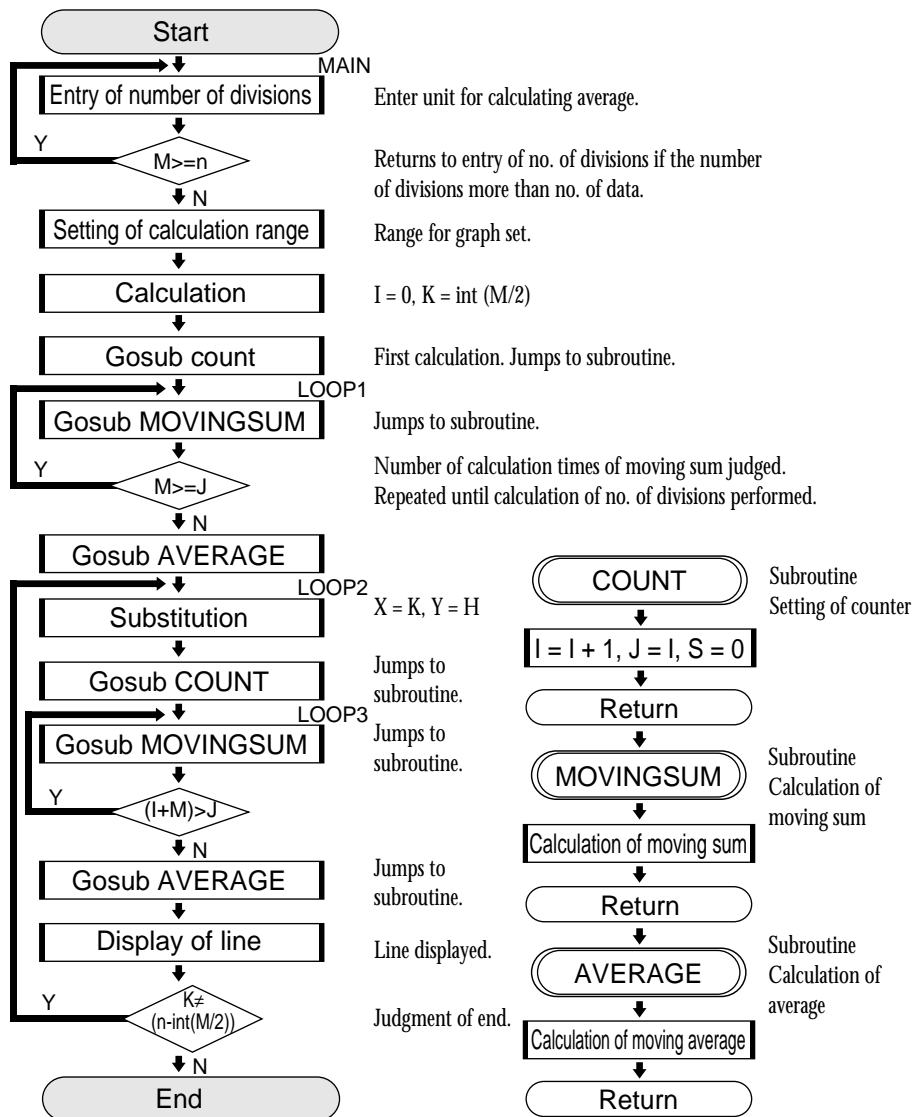

## Calculation

$$H_i = \frac{X_{i-(M-1)/2} + \dots + X_i + \dots + X_{i+(M-1)/2}}{M}$$

$$(I = 1 + \frac{M-1}{2}, 2 + \frac{M-1}{2}, \dots, n + \frac{M-1}{2})$$

$H_i$  : moving average  
 $M$  : number of divisions  
 $X_i$  : data  
 $n$  : number of data

# Ordinary Differential Equations

Enter the initial conditions (X, Y) with the step H and interval T. Use Runge Kutta Gill method to solve the ordinary differential equation of first order.

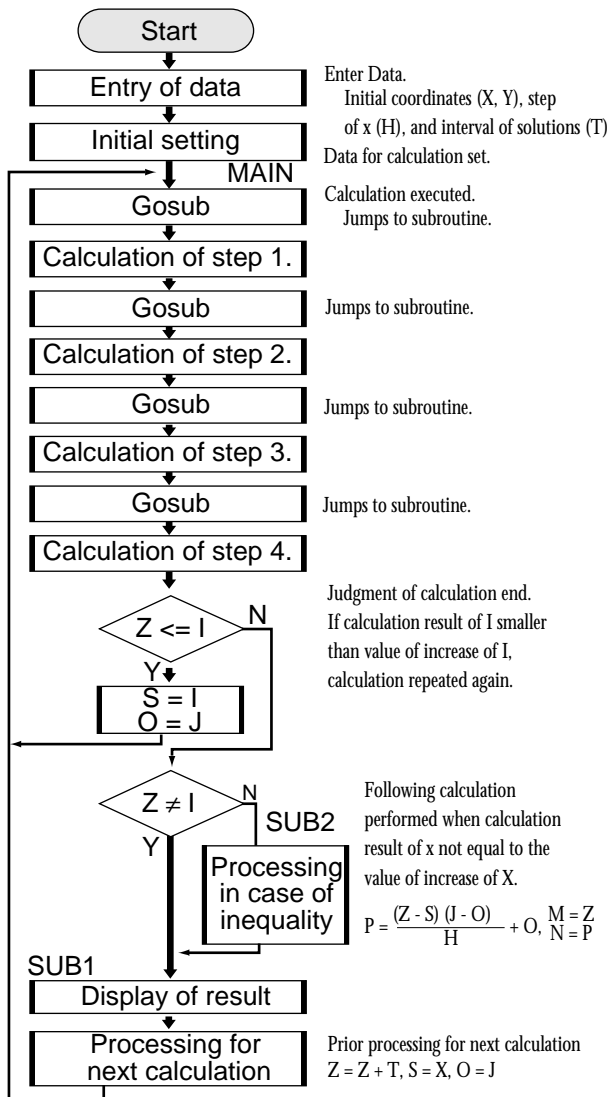

## Calculation

Use the following four steps of Runge Kutta Gill method to find the equation  $X_{n+1}$  and  $Y_{n+1}$  from  $X_n$  and  $Y_n$ . Input  $Q_0 = 0$  at the starting point  $X_0$ .

1.  $K_0 = Hf(X_n, Y_n)$ ,  $R_1 = (1/2)(K_0 - 2Q_0)$ ,  $Y^{(1)} = Y_n + R_1$
2.  $Q_1 = Q_0 + 3R_1 - (1/2)K_0$   
 $K_1 = Hf(X_n + H/2, Y^{(1)})$ ,  $R_2 = (1 - \sqrt{1/2})(K_1 - Q_1)$ ,  $Y^{(2)} = Y^{(1)} + R_2$
3.  $Q_2 = Q_1 + 3R_2 - (1 - \sqrt{1/2})K_1$   
 $K_2 = Hf(X_n + H/2, Y^{(2)})$ ,  $R_3 = (1 + \sqrt{1/2})(K_2 - Q_2)$ ,  $Y^{(3)} = Y^{(2)} + R_3$
4.  $Q_3 = Q_2 + 3R_3 - (1 + \sqrt{1/2})K_2$   
 $K_3 = Hf(X_{n+1}, Y^{(3)})$ ,  $R_4 = (1/6)(K_3 - 2Q_3)$ ,  $Y_{n+1} = Y^{(3)} + R_4$   
 $Q_4 = Q_3 + 3R_4 - (1/2)K_3$

**Exercise**

When a mouse is given a dosage of hormone, the relationship between dosage amount and increase of mouse weight is as shown in the following table. Find the analysis of variance. If the value of the variance ratio is larger than the value of the F- distribution table at the 5% level of significance, the relationship between the hormone amount and the increase of mouse weight is a causal relation.

	Increase mouse weight (grams/day)					
		10	20	30	40	50
Hormone (grams/mouse)	10	882	891	864	888	885
	20	923	915	923	912	930
	30	933	939	925	940	932

The number of levels (number of columns in the table) is  $A = 3$

The repeated frequency (number of rows in the table ) is  $N = 5$

Set up condition: decimal point in Float Pt Mode.

The F-distribution chart shows that the value of F of upper probability  $P = 5\%$  is 3.89. Since  $f > 3.98$  in this example, the relationship between the hormone amount and the increase of mouse weight is a causal relation with 5% level of significance.

# Calculating Parabolic Motion

Display on a graph the altitude change and the horizontal distance over a period of time when an object is thrown at initial velocity  $V_0$  and angle  $\theta$ , and find the horizontal distance and altitude after  $t$  seconds. Specify the angle in Deg.

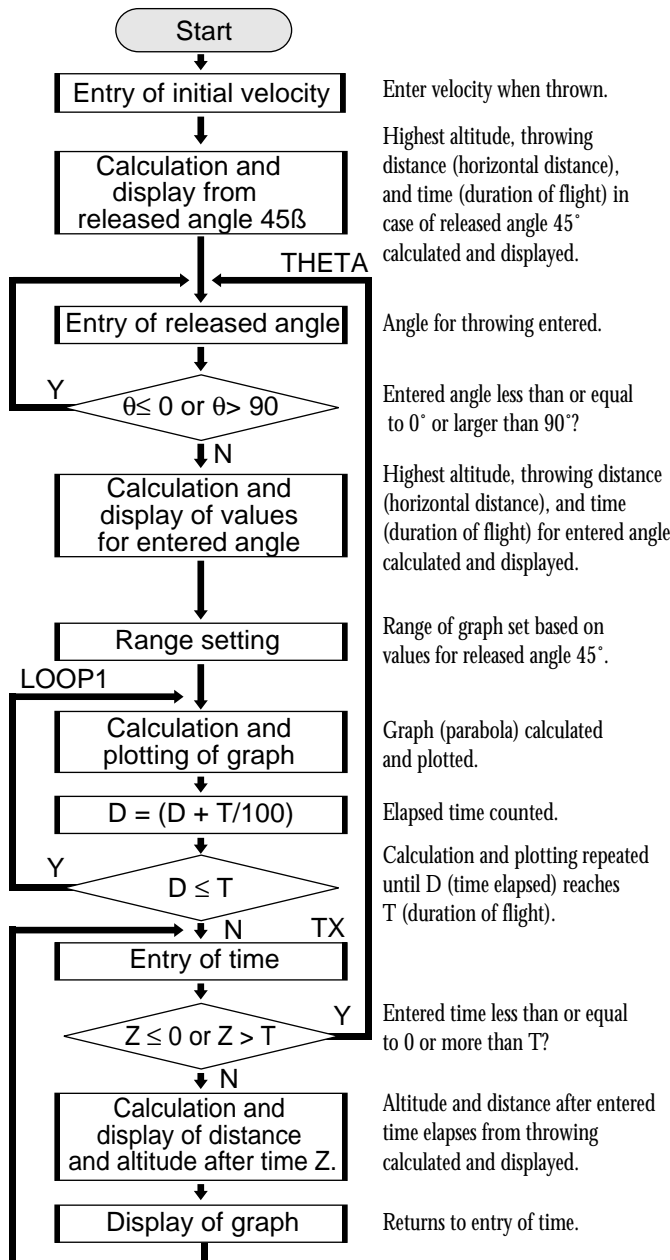

## Calculation

$$X = V_0 \cdot \cos \theta \cdot T \quad Y = V_0 \cdot \sin \theta \cdot T - \frac{1}{2} gT^2$$

Initial velocity  $V_0$  [m/s]  
 Angle  $\theta$  [°]  
 Gravitational acceleration  $g = 9.8$  [m/s<sup>2</sup>]  
 Time  $T$  [s]

# Key pad for the SHARP EL-9900 Calculator

Basic Keyboard

- ① Graphing keys
- ② Power supply ON/OFF key
- ③ Secondary function specification key
- ④ Alphabet specification key
- ⑤ Display screen
- ⑥ Cursor movement keys
- ⑦ Clear/Quit key
- ⑧ Variable enter key
- ⑨ Calculation execute key
- ⑩ Communication port for peripheral devices

Use this form to send us your contribution

Dear Sir/Madam

We would like to take this opportunity to invite you to create a mathematical problem which can be solved with the SHARP EL-9900 graphing calculator, including the necessary procedures and definitions as outlined in the form below.

For this purpose, we would be grateful if you could complete the form and return it to us by fax or mail. If your contribution is chosen, your name will be included in the next edition of The EL-9900 Graphing Calculator Handbook or on our homepage. We regret that we are unable to return contributions. Also, please note that the problems you send us might be opened to the public at Sharp's home page.

We thank you for your cooperation in this project.

School/College/Univ.: _____		
Address: _____		
_____		_____
Post Code:		Country:
Phone: _____	Fax: _____	
E-mail: _____		

**SUBJECT:** Write either a title or about the subject matter.

.....

**INTRODUCTION and CALCULATION:**

Write a brief explanation of the subject, and the formula with definitions, including a diagram if relevant.
